Accurate event timing made easy ... and affordable.

IPICO
SPORTS

We know the active sports industry inside and out—and we're passionate about improving it.

That's why we've turned a high-tech, innovative timing and tracking system into a low-cost, simple solution that makes electronic timing possible for organizations and events of any size. From running clubs and health clubs to schools and park districts—IPICO Sports is changing the way the world views sports.

YOUR ADVANTAGE

Developed by a team with an extensive background in running events, club management, and results scoring, IPICO Sports' turnkey event timing solutions are the ideal choice for running clubs and events.

Accuracy

The dual frequency technology used by IPICO Sports offers improved performance over traditional low-frequency timing systems. The high read-range and robust anti-collision mechanism allow successful timing locations for events with the most demanding environmental conditions and high densities of participants.

Ease of use

Our systems are extremely compact and lightweight. They can be set up in a few minutes, while event data can be seamlessly imported in leading scoring applications. IPICO Sports' soft, anti-slip, antenna mats come with zipper bags for convenient transportation and storage.

Scalability

Additional equipment can be purchased from IPICO Sports in order to provide more timing locations, such as start line and splits, or to extend the size of the finish line for larger events. Available ankle tags make it possible to use the system for triathlon and other multisport events.

Affordability

IPICO Sports' products are competitively priced, so clubs and other organizations can own a complete timing system and provide their members with personal tags that can be used at all the events timed with the IPICO Sports system.

OUR SYSTEMS

The Elite System

The Elite System is based on the Elite Reader, which connects to four 2.4m-wide antenna mats. With one reader it is possible to arrange a 4m-wide timing location (two lines of two mats) or a 2m-wide timing location (four lines of one mat). More readers can then be combined in order to arrange a larger timing location (8m or more). The Elite Reader weighs only 40 pounds and has an internal battery that can last for up to four hours. The reader can also be connected to external batteries or generators. The antenna mats are flexible and can be rolled and transported in the included shoulder strap bag.

The Lite System

The Lite System is based on the Lite Reader, which drives two mats (for a 2m-wide timing location) and is suitable for small events (hundreds of participants), race splits, or training sessions. The Lite Reader is smaller and lighter (about 20 pounds) than the Elite Reader. Data can be collected either through Ethernet connection or by plugging a flash drive in the Elite Reader's USB port. Antenna mats used with the Lite Reader are the same as those used with the Elite Reader.

Global product support

The tags

All of our systems work with IPICO Sports Shoe Tags and Multi-sport Tags. The Shoe Tag is small and lightweight and can be weaved into shoe laces or attached to them with zip or twist ties. Shoe Tags feature customizable graphics. Multi-sport Tags can be worn on the ankle for multisport and cycling events.

IPICO Sports provides a USB desktop reader that can be used to scan tags from a PC and quickly identify the participant. This platform makes it possible to assign personal tags to each participant, eliminating the need to assign tags for each event and collect them at the end of the race.

IPICO Sports gives you new opportunities to use electronic timing equipment—equipment that can truly help your organization produce better events. For further information and pricing details, or to find out where you can see IPICO Sports in action, please contact:
